

MAKE YOUR OWN....

BIRD FEEDER

1. Prepare 2 old water bottles. Cut the flat bottom off Bottle 1 and save it for a lid. Cut the pointed top off Bottle 2 and recycle it. From Bottle 2, cut two holes near the bottom for a stick to go through (see diagram) and two holes to use as doors (about an inch above the stick holes-see diagram).

2. Thread a long piece of yarn through the doors to use as a hanger. Make sure it is not in the way of step 3.

3. Squish and slide Bottle 1 (Tip A first) into Bottle 2 until Tip A is below the bottom of the doors.

4. Fit a stick through the holes for the birds to sit on.

5. (Everyone's favourite part!) Pour birdseed into your new bird-feeder! Squish the lid on and find a cool spot to hang your new bird-feeder! It may take a day or two for the birds to find your feeder, but they will come!
